

## Manufacturing Process Engineer (1 Year Contract)

### Purpose:

To develop, implement, monitor and maintain efficient manufacturing processes and workflow, for assembly products.

### Role & Responsibilities:

- Organize, implement and maintain production process flow
- Lead & coordinate the Manufacturing Readiness Review (MRR) meetings and tasks
- Develop working instructions, workmanship standards and process documents, and ensure they are followed
- Continually improve existing operations for: increased quality, productivity, efficiency and cost savings
- Assist in the Root Cause Analysis (RCA) for NCR's where applicable
- Investigate and report operational problems affecting production, and recommending solutions
- Liaise with production planner/scheduler for ensuring the released products have adequate BOM and routings
- Manage manufacturing documentation required for product manufacturing i.e. relevant drawing, BOM, accurate work instructions, workmanship standards and process procedures
- Use manufacturing data to monitor, measure and improve the processes
- Continually monitor, develop and improve the incoming Inspection function
- Organize meetings with other team members to facilitate growth and development
- Identify ways to reduce production costs through value engineering and recommendations – i.e. new process equipment, equipment justification to improve performance
- Work with design engineering on DFX (design for excellence) to include:
  - Design for cost
  - Design for test
  - Design for manufacturability
  - Design for assembly
- Work with other relevant departments to determine estimated costs, run time, cost reduction and close the feedback loop
- Liaise with suppliers on manufacturing process
- Train and supervise staff on new development processes and technology
- Establish a training and quality culture
- Other duties as delegated by your manager.

### Education/Experience:

- B.Sc. Electrical or Mechanical Engineering
- 5+ years' experience
- Proven track record and working knowledge in Machine Building industry
- Good knowledge of cell custom build, lean Manufacturing, six sigma and ISO methodology & requirements
- Knowledge & experience of part approval process including PPAP
- Experience with Part Validation process
- Knowledge and experience with internal auditing
- Knowledge and experience with supplier approval process
